Application/Control Number: 10/630,669 Art Unit: 1774 July 6, 2007 Page 3

Claim Amendments:

Please cancel claim 5.

- 1. (previously presented) A composite polymeric material having high resistance to impact energy comprising pre-expanded polymer granules filled with air and uniformly dispersed in a matrix of an expanded polyurethane resin, said expanded polyurethane resin having been expanded and hardened about said pre-expanded polymer granules without causing melting or breakdown of said pre-expanded polymer granules that are filled with air.
- 2. (previously presented) The material according to claim 1 wherein the matrix of an expanded polyurethane resin is a polycondensation of an isocyanate with a compound containing active hydrogen or polyisocyanate with a compound containing active hydrogen.
- 3. (original) The material according to claim 2, wherein the isocyanate or polyisocyanate and the active hydrogen containing compound have a polymerization time higher than 30 seconds.
- 4. (original) An impact-resistant manufactured article including a composite polymeric material having high resistance to impact energy according to claim 1.
 - 5, (cancelled).
- 6. (previously presented) The material according to claim 1, wherein the preexpanded polymer granules have a substantially uniform distribution in said matrix.
 - 7. (cancelled).
 - 8. (cancelled).

Application/Control Number: 10/630,669 Art Unit: 1774 July 6, 2007 Page 4

9. (previously presented) The material according to claim 1, wherein the matrix of expanded polyurethane resin has a cellular structure with cells internally containing the pre-expanded polymer granules.
